Power Shaver,

Honolulu Community College has experienced power quality and condition problems in several of our buildings. One building was being affected with frequent elevator shutdowns and a high rate of elevator motor burn outs. These failures severely inconvenienced our students and faculty and caused expensive and time consuming repairs.

An elevator service technician referred "USES" to us. Since we installed the USES® XL Shunt Efficiency System almost a year ago, the power quality and condition has improved dramatically, and we have not experienced any power related interruptions or damage in the building since.

The USES® system has increased and stabilized the buildings voltage by almost 7 volts per phase, increased the power factor and substantially reduced the kW demand and energy consumption of the building, per our verification recordings and monitoring system.

Honolulu Community College is very pleased with the results and we are currently continuing to install the USES® system to other buildings on our campus.

Sincerely,

A handwritten signature in black ink, appearing to read "D. Tanaka".

David M. Tanaka
